FreeStack Responsive
Add-Ons Pack #1
Changelog v2.0

Lists all the changes and additions made on each of the
Blueball FreeStack Responsive Add-Ons Pack 1 update releases.

Blueball FreeStack Responsive Add-Ons Pack 1 version 2.0 update. Released 10-26-15

This update involves updates to the FreeStack R NavMenu Res3, FreeStack R NavMenu Res4, FreeStack R NavMenu Res5, FreeStack R NavMenu Res6, FreeStack R NavMenu Res7, and FreeStack R Reposition stacks. You need to install all 6 FreeStack Responsive Add-Ons Pack 1 stacks in this v2.0 update and restart Rapidweaver.

- Updated all six stacks plist file for complete RapidWeaver 6 and Stacks 3 compatibility.
- Updated all six stacks icon image files for RapidWeaver 6 and Stacks 3.
- All six stacks will now display correctly under Blueball Design in RapidWeaver 6's Addons Manager window.
- Added five new sub menu level indicator FontAwesome icons for parent level and sub menu levels in all five nav menu stacks. Select and choose which icon to use for parent level and for sub menu level using popup menu in the hud controls for each stack.
- Substantially reworked and modified scripts used in each FreeStack R Nav Menu stacks to comply with Stacks 3 while retaining compatibility with Stacks 2.5+.
- Updated css files in all six stacks.
- Updates both readme files.

Blueball FreeStack Responsive Add-Ons Pack 1 version 1.3 update. Released 09-10-13

This update involves updates to the FreeStack R NavMenu Res3, FreeStack R NavMenu Res4, FreeStack R NavMenu Res5, FreeStack R NavMenu Res6, and FreeStack R NavMenu Res7 stacks. You need to install all 6 FreeStack Responsive Add-Ons Pack 1 stacks in this v1.3 update and restart Rapidweaver.

- This update involves updates to the FreeStack R NavMenu Res3, FreeStack R NavMenu Res4, FreeStack R NavMenu Res5, FreeStack R NavMenu Res6,

and FreeStack R NavMenu Res7 stacks. You need to install all 6 FreeStack Responsive Add-Ons Pack 1 stacks in this v1.3 update and restart Rapidweaver.

- Fixed Firefox desktop browser display bug in all 5 FreeStack Responsive NavMenu Res stacks where sub menu level li elements had a small gap beneath each li element preventing them from being selectable in Firefox only.
- Fixed Firefox desktop browser mobile nav menu layout display bug in all 5 FreeStack Responsive NavMenu Res stacks where when Firefox desktop browser window width was reduced to minimum available width and mobile nav menu layout was displayed, content below mobile nav menu layout was not positioned and displayed correctly in narrow Firefox desktop browser window.
- Fixed wrap issue bug in all 3 FreeStack Responsive Horizontal NavMenu Res stacks where desktop parent level menu li link elements were not wrapping correctly to a second line to allow content immediately below nav menu to display in full correctly.
- Increased sub menu level width in all 5 FreeStack Responsive NavMenu Res stacks. Increased maximum sub menu level width to 400px from previous maximum width of 300px to accommodate longer European language page names in sub menu levels.

Blueball FreeStack Responsive Add-Ons Pack 1 version 1.2 update. Released 09-05-13

This update involves important updates to the FreeStack R NavMenu Res3, FreeStack R NavMenu Res4, FreeStack R NavMenu Res5, FreeStack R NavMenu Res6, and FreeStack R NavMenu Res7 stacks. You need to install all 6 FreeStack Responsive Add-Ons Pack 1 stacks in this v1.2 update and restart Rapidweaver.

- Fixed bug in FSR NavMenu Res5 and Res7 stacks where mobile nav bar background color did not display. This was due to an error in the css files in each stack. The background color now displays the hud control specified color correctly as expected.

- Fixed bug in FSR NavMenu Res5 and Res7 stacks where bottom border did not span full width of parent level menu width. This was due to an error in the css files in each stack. The bottom border now spans the full width of the parent menu level as expected.
- Fixed bug in FSR NavMenu Res5 and Res7 stacks where border radius on parent menu was not applied to correct corners. This was due to an error in the css files in each stack. The border radius amount is now applied to the correct corners on the first and last parent li elements as expected.
- Adjusted the positioning on parent level sub menu level indicator arrow on FSR NavMenu Res3, Res4, and Res6 stacks to give more spacing between arrow and li element link text.
- Fixed bug in all FSR NavMenu stacks where text overflow on sub menu level li elements caused gap to appear under the sub menu li link. This was caused when the width of the sub menu level was not wide enough for the li link text to display on one line. Text overflow now is truncated and will display an ellipsis when the text overflows the sub menu width preventing the gap display.
- Adjusted and tweaked all stacks hud controls and features. Involved minor adjustments to all stacks css and plist files.
- Updated all stack versions to display v1.2 in Stacks Elements window.
- Updated readme file.

Blueball FreeStack Responsive Add-Ons Pack 1 version 1.1 update. Released 09-02-13

Minor but important updates to all six stacks require all six v1.1 stacks to be installed replacing the v1.0 stacks you have currently installed.

Blueball FreeStack Responsive Add-Ons Pack 1 version 1.0 update. Released 08-29-13

Initial release.
