

# **FREESTACK** RESPONSIVE

## Blueball Design FreeStack Responsive Theme v2.3 Changelog Readme

Lists all the changes and additions made on each Blueball FreeStack Responsive theme update release.

## Blueball FreeStack Responsive theme version 2.3 update. Released 12-07-14

**This is a MAJOR update to the FreeStack Responsive theme and stacks. You will need to install the v2.3 FreeStack Responsive theme and all its stacks and then restart RapidWeaver®.**

Note: Theme and stacks plist files and icons images updated to display correctly in RapidWeaver 6's Manage Addons window.

### FreeStack Responsive Stacks:

#### **FSR Fixed Height Stack**

- Adjusted class name in FSR Fixed Height stack to avoid conflict with other stacks.

#### **FSR Footer Stack**

- Added in font sizing hud control

#### **FSR Image BG Pro Stack**

- Added breakpoint width hud control.

#### **FSR Image Stack**

- Added desktop measurements popup menu hud control. Select from %, px, or ems.
- Added max-width hud control for desktop image width.
- Added mobile measurements popup menu hud control. Select from %, px, or ems.
- Added max-width hud control for mobile image width.

#### **FSR Logo Stack**

- Added desktop measurements popup menu hud control. Select from %, px, or ems.
- Added max-width hud control for desktop logo image width.
- Added mobile measurements popup menu hud control. Select from %, px, or ems.
- Added max-width hud control for mobile logo image width.

#### **FSR Max Width Stack**

- Added desktop measurements popup menu hud control. Select from %, px, or ems for desktop width setting.
- Added mobile measurements popup menu hud control. Select from %, px, or ems for mobile width setting.

#### **FSR NavMenu Res1 Stack**

- Added new mobile popup nav menu sub level bullet styles for li elements. You can now select from Dash (default), Arrow, Dot, or Plus.
- Added indent for sub menu level li elements in mobile popup nav menu.

### **FSR NavMenu Res2 Stack**

- Added new mobile popup nav menu sub level bullet styles for li elements. You can now select from Dash (default), Arrow, Dot, or Plus.
- Added indent for sub menu level li elements in mobile popup nav menu.

### **FSR Tumblr Limited Stack**

- Changed tumblrblog div font size and line height to inherit.

### **FreeStack Responsive Theme:**

- Removed lang-“en” from html tag in theme’s index.html file so user’s localized language by default would be applied to their site instead of English language.
- Added in new FSR Add-Ons Pack 2’s Sticky Nav Menu stacks css to custom nav menu font theme variation’s css files so custom font styles will display in those nav menu stacks.
- Added new custom font styles for content custom font styles theme variation group. New styles include Fira Sans, Montserrat, Roboto Slab, and Source Sans Pro.
- Added new custom font styles for headline custom font styles theme variation group. New styles include Fira Sans, Montserrat, Roboto Slab, and Source Sans Pro.
- Added new custom font styles for nag menu custom font styles theme variation group. New styles include Fira Sans, Montserrat, Roboto Slab, and Source Sans Pro.
- Made minor updates to theme’s styles.css file.

### **Blueball FreeStack Responsive theme version 2.1 update.**

#### **Released 06-14-14**

#### **This is a minor update that only involves 2 FreeStack Responsive stacks.**

- Corrected bug in height setting in FreeStack R iFrame stack preventing specified height to display. Specified height now displays in the stack’s hud controls as expected.
- Corrected bug in mobile min-width hud control in FreeStack R Max-Width stack that prevented the mobile layout min-width setting from being applied.

### **Blueball FreeStack Responsive theme version 2.0 update.**

#### **Released 05-26-14**

**This is a MAJOR update to the FreeStack Responsive theme and stacks. You will need to install the v2.0 FreeStack Responsive theme and all its stacks.**

## **FREESTACK RESPONSIVE THEME V2.0 UPDATES**

- Removed IE7 transparency support from index.html file
- Removed 1px square transparent gif file from theme's Contents folder.
- Fixed issue in index.html file where custom css added to custom css area in page inspector would not be applied for some users.
- Removed below code in index.html file that was causing FreeStack Responsive pages to not load in IE8 when FreeStack Responsive Add-Ons Pack 1 nav menu stacks were used on site pages:

```
<!--[if lt IE 9]>  
<script src="http://css3-mediaqueries-js.googlecode.com/svn/trunk/css3-mediaqueries.js"></script>  
<![endif]-->
```

Pages now load and display as expected in IE8.

- Updated jQuery library version called in index.html file to 1.9.1.
- Updated theme plist file extensively.
- Updated theme version number to 2.0.
- Added new content font styles to theme variation group: Exo (Google), Open Sans (Google), Raleway (Google), and Roboto (Google).
- Added new headline font styles to theme variation group: Bebas (@font-face), Exo (Google), Open Sans (Google), Raleway (Google), Roboto (Google), and Roboto Slab (Google).
- Added new nav menu font styles to theme variation group: Exo (Google), Open Sans (Google), Raleway (Google), and Roboto (Google).
- Added font-smoothing and text-rendering css to body in styles.css file.
- Added in new **body background image repeat option - body background cover** (yes full screen image background on pages is now included as a theme variation option). Recommend minimum image width of at least 1500px for best display results. My jpg test image for this was 1500px wide by 1000px tall with a total file size of 98kb.

## **FREESTACK RESPONSIVE STACKS V2.0 - UPDATES**

- **FreeStack R 2Columns stack.**

Major updates made to this stack! Reworked hud controls layout to display new desktop and mobile sections separately.

Added in new desktop layout top, right, bottom and left column padding controls. Adjust each to have specific padding settings applied to both columns automatically in desktop layout only.

Added in new mobile layout top, right, bottom and left column padding controls. Adjust each to have specific padding settings applied to both columns automatically in mobile layout only. Updated plist file.

**NOTE!** You may have to reset the column widths on this stack in all instances on an existing site again due to new divs and classes added into stack for padding. Results have varied so far from site to site but sometimes the FSR 2Columns stack opens at its default 50/50 column widths setting instead of what widths had been put in place on existing site page using v1.8 FSR 2Columns stack.

- **FreeStack R 3Columns stack.**

Major updates made to this stack! Reworked hud controls layout to display new desktop and mobile sections separately.

Added in new desktop layout top, right, bottom and left column padding controls. Adjust each to have specific padding settings applied to all 3 columns automatically in desktop layout only.

Added in new mobile layout top, right, bottom and left column padding controls. Adjust each to have specific padding settings applied to all 3 columns automatically in mobile layout only.

Updated plist file.

- **FreeStack R Contact Plus stack.**

Added new Title Size hud control to allow resizing of title text on contact form layout. Updated plist file.

- **FreeStack R Fixed Height stack.**

Added new Minimum Fixed Height hud control to stack. Updated plist file.

- **FreeStack R Image BG Pro stack.** Scoped css code in fsrimagebgpro.css file to avoid conflicts with some third party stacks.

- **FreeStack R Image stack.**

Added in new mobile image max-width and min-width image sizing controls for mobile layout only.

Added in new mobile image alignment hud option.

Scoped css code in fsrimage.css file to avoid conflicts with some third party stacks. Other misc. updates made to fsrimage.css file.

Reworked image align options. Now works as expected.

- **FreeStack R Logo stack.**

Added in new logo alignment hud control for mobile layout only.

New default mobile logo image display size set at 75% now instead of 60%.

- **FreeStack R Max Width stack.**

Added new desktop layout minimum width hud control.

Added new mobile layout minimum width hud control.

- **FreeStack R NavMenu Res1 stack.**

Added in new arrow images along with new 50% opacity arrow images too.

Added in new hud control options for the new arrow images too.

Changed bold font weight to 700. Old bold font weight was 600.

- **FreeStack R NavMenu Res2 stack.**

Added in new arrow images along with new 50% opacity arrow images too.

Added in new hud control options for the new arrow images too.

Changed bold font weight to 700. Old bold font weight was 600.

- **FreeStack R Slogan stack.**

Updated font weight hud control selections. Includes normal 400, semi-bold 600, and bold 700.

- **FreeStack R Styler stack.**

Scoped css code in fsrstyler.css file to avoid conflicts with some third party stacks.

Added in new set of mobile layout hud controls. You can now specify font sizes and line height for all H tags and P tagged text that will be applied for mobile layout display only.

Added in new media query breakpoint hud control to specify when mobile layout settings will display.

- **FreeStack R Title stack.**

Updated font weight hud control selections. Includes normal 400, semi-bold 600, and bold 700.

- **FreeStack R Tumblr Limited stack.**

Updated plist file default settings.

- **FreeStack R Twitter Button stack.**

Added target of \_blank to href to force new window to open when button is clicked on a site page.

Added in new "Alt Text Before" hud control field for non-English speaking users to customize word Follow in alt text to their language. This will appear before user name in alt text in href.

Added in new "Alt Text After" hud control field for non-English speaking users to customize words On Twitter in alt text to their language. This will appear after user name in alt text in href.

## **Blueball FreeStack Responsive theme version 1.8 update. Released 10-07-13**

- **This update involves important modifications to the FreeStack Responsive theme and stacks. You will need to install the v1.8 FreeStack Responsive theme and all its stacks.**
- **FreeStack R Max Width stack.** Changed default maximum width setting to 960px. Increased maximum width setting to 3000px.
- **FreeStack R Logo stack.** Added new mobile breakpoint hud control to allow end user to set custom breakpoint width. Default breakpoint is 600px. Added new mobile layout logo sizing hud control option to allow end user to set max width percentage size that logo image will display at on mobile layout. Default percentage size is 60%. Added new logo alignment hud control.
- **FreeStack R 3 Columns stack.** Adjusted width of columns to be equal at 33.33% each.
- **FreeStack R 2 Columns stack.** Fixed display issue in Firefox desktop browser when mobile layout is viewed at its narrowest width. Both columns in stack now float left when in single column view for mobile layout display.
- **FreeStack R FileShare stack.** Fixed download icon image display issue. Download icon images now display as expected on all download links.
- **FreeStack R Styler stack.** Fixed font sizing issue on font sizing hud controls. You can now set any font sizing you want like 1.15 ems instead of just 1em, 2em, etc.
- **FreeStack R Title stack.** Added in font weight popup menu hud control. You can now select either bold (default) or normal.
- **FreeStack R Slogan stack.** Added in font weight popup menu hud control. You can now select either bold (default) or normal.

- **FreeStack R NavMenu Res1 stack.** Increased sub menu level maximum width to 400px to accommodate longer non-English European language page names.
- **FreeStack R NavMenu Res2 stack.** Increased sub menu level maximum width to 400px to accommodate longer non-English European language page names.

## **FreeStack Responsive Theme modifications**

- Updated plist file.
- Updated index.html file.
- Updated all Nav Menu Font Styles theme variation css files so custom font styling selected would also be applied to new FreeStack Responsive Add-OnsPack 1 nav menu stacks and their mobile nav menu layout too.

## **Blueball FreeStack Responsive theme version 1.6 update. Released 03-15-13**

- **This update involves important updates to the FreeStack R NavMenu Res1 stack, the FreeStack R NavMenu Res2 stack, the FreeStack R 3Columns stack, the FreeStack R Image BG Pro stack, The FreeStack R Contact Plus stack, and the FreeStack R Transparent stack. You only need to install these 6 FreeStack Responsive stacks in this v1.6 update.**
- **Fixed column order display issue with FreeStack R 3Columns stack** so column #3's content displays as expected after column #2's content on smaller screen sizes when repositioned using media queries.
- **Restructured and recoded FreeStack R Image BG Pro stack** so that stacks and their content that were added into the FreeStack Image BG Pro's content area will now display beyond the bottom edge of the background image. Added in new hud control for custom background image height to be set with.
- **Major restructuring and recoding of FreeStack R NavMenu Res1 and Res2 stacks.** Removed all floats from main nav menu elements. You can now left, right, AND center align the main nav menu container! Fixed border radius hud control issue where sub menu level li elements sometimes got rounded too. Only main nav menu level corners are rounded now. By default the right border on the last main menu level li element is removed and weight is set to 0px.
- **Updated FreeStack R Contact Plus stack** css code with new media query css for smart phones so all 4 form field widths will span the screen width in either portrait or landscape display.

- **Added in new BG Corner Radius hud control to FreeStack R Transparent stack.** This allows user to set corner radius of transparent background color container div anywhere from 0px up to 24px.

## **Blueball FreeStack Responsive theme version 1.5 update. Released 02-22-13**

- **This update involves small but very critical updates to the FreeStack Responsive theme, the FreeStack R NavMenu Res1 stack, the FreeStack R NavMenu Res2 stack, and the FreeStack R Logo stack. You will need to install the FreeStack Responsive theme and all the stacks in this v1.5 update.**
- Added css3-mediaqueries.js file call to head area of theme's index.html file. This allows IE7 and IE8 browsers to recognize all media queries css styling used in FreeStack Responsive theme and stacks.
- Updated theme version number to v1.5 in comment in theme's index.html file.
- Major update to FreeStack R NavMenu Res1 and NavMenu Res2 stacks. Updated plist and css files in each. Fixed problem where indicator arrow would not appear until parent menu level had cursor moved over it. Indicator arrow in parent level now appears on page load in browser.
- Fixed issue with FreeStack R NavMenu Res 1 and NavMenu Res2 stacks where mobile popup menu was displaying in IE7 and IE8 under desktop nav menu. The mobile popup menu is not displayed now in either browser on desktop or tablets.
- Updated FreeStack R Logo stack. Removed tablet logo sizing hud option. Fixed smart phone logo sizing option so scaling now works as expected on smart phone screens including latest iPhone.
- Added in fix to theme so that video files displaying in a lightbox would scale and fill lightbox container div correctly.
- Fixed colourtag.css file typo so that movie-page-title and movie-title classes would display in the correct headline color in the theme variation colorpickers.
- Updated all FreeStack Responsive stacks to show version number 1.5.

## **Blueball FreeStack Responsive theme version 1.1 update. Released 02-13-13**

- **This update only involves the actual FreeStack Responsive theme and the FreeStack R NavMenu Res1 stack. You will need to re-install only the theme and the one noted stack in this update. None of the other stacks were changed and do not need to be re-installed.**

- Fixed #title h1 colourtag.css file typo.
- Recoded custom body background theme variations to work with all "Relative To..." site setup options when images are added into Resources area. Theme variations now list image name required for custom body background images too
- Updated Body Background Image Repeat theme variations.
- Added “#” to footer div in fontsize\_large.css and fontsize\_xlarge.css files so footer text will display in selected font size as expected.
- Updated FreeStack R Nav Res1 stack’s css file. Removed background color from the #navbar div. If you want a solid color to display the full width of the nav stack itself, use the default Background Color control at the top of the Stacks 2 hud control window to add a solid background color in place.
- Updated styles.css file extensively.
- Updated theme index.html file extensively.
- Added in version number to index.html for easier theme version identification by end user. Viewing source code in Rapidweaver will allow end user to get version number of theme now.
- Updated theme plist file extensively.
- Updated 8 default theme styles.
- Updated main FreeStack responsive theme readme manual.

**\*PLEASE NOTE! If you are using a custom body background image on your existing FreeStack Responsive theme v1.0 site pages:**

**The first time you open your site file up after installing the FreeStack v1.1 theme and stack update, you may have to reselect your custom body background image theme variation again along with the Body Background Image Repeat theme variation on each of your site pages. You will then have to do a complete republish of your site one time for the new updates made to the FreeStack responsive theme to take effect.**

**Blueball FreeStack Responsive theme version 1.0.**

**Released 02-08-13**
