

FREESTACK

1 Theme. Unlimited Layouts.

Blueball Design FreeStack Theme v7.0 Changelog Readme

Lists all the changes and additions made on each Blueball FreeStack theme update release.

Blueball FreeStack version 7.0 update. Released 07-16-12

This is a small but update to the Blueball FreeStack theme and stacks that requires you to install the FreeStack v7.0 theme, all 27 updated FreeStack v7.0 stacks, and then restart Rapidweaver.

FREESTACK THEME UPDATES:

- Changed doctype to <!DOCTYPE html> and added html5shiv javascript file call to FreeStack theme's index.html file.
- Changed version in plist file to 7.0, adjusted 2 other misc. items.
- Changed FreeStack theme's icon image to new FreeStack icon.

FREESTACK STACKS UPDATES:

- **Modified Contact Plus stack.** Changed CharSet in class.phpmailer.php script to utf8 to support umlaut special characters.
- **Modified Styler stack.** Fixed minor typo in stack's css file that was preventing active link underline hud option from working. Now works as expected.
- Changed version numbers and author name on all FreeStack stacks.

Blueball FreeStack version 6.5 update. Released 05-03-12

This is a major update to all Blueball FreeStack stacks that requires you to install all 27 updated FreeStack v6.5 stacks, the FreeStack v6.5 theme, and then restart Rapidweaver.

FREESTACK THEME UPDATES:

- Updated plist file.
- Updated index.html file. Changed jQuery call to version 1.7.2 and using https link for the call.
- Updated default Javascript file to latest version.
- Added in new link underline state theme variations. There are now 3 options to use to control the link underline states.
- Added in visited link colorpicker. Default is set to purple #800080 web standard.
- Added in new 810px page width for new Facebook Timeline page creation.
- Fixed margin-bottom theme variation bug a few users had run into where it was not working.

- Updated small and large preview images.
- Removed File Share stack from new version 6.5 bundle that only worked with Stacks 1.4.4.

Blueball FreeStack version 6.1 update. Released 12-09-11

This is a significant update to all Blueball FreeStack stacks for Stacks 2, that requires you to install all 27 updated FreeStack stacks, the FreeStack theme, and then restart Rapidweaver.

- Added in new custom javascript to all 7 FreeStack Nav Menu stacks to fix sub menu display issue when Nav Menu stacks were placed within another stack container div in Stacks 2. All Nav Menu stacks sub levels now display as expected as a standalone stack or within a container stack.
- Fixed sub menu levels overlap problem in FreeStack Nav Menu T1 stack.
- Updated the version number to 6.1 on all 27 FreeStack stacks for Stacks 2 compatibility and to make it easier for FreeStack users to stay up with the version releases and make sure they are using latest stack versions.
- Added in new popup menu hud control in Twitter Button stack to use to select the button color you want to use.
- Added in new popup menu hud control in Twitter Share stack to use to select the button alignment you want to use.
- Update FreeStack theme version number to 6.1 in plist file.
- Updated all stack images in FreeStack readme manual pdf file to show new Stacks 2 hud window controls area.

Blueball FreeStack version 6.0 update. Released 11-28-11

This is a MAJOR update to all Blueball FreeStack stacks for Stacks 2, that requires you to install all 27 updated FreeStack stacks, the FreeStack theme, and then restart Rapidweaver.

- Updated all 27 FreeStack stacks for Stacks 2 compatibility and new features.
- Added in new font weight hud control to all FreeStack Nav Menu stacks.
- Added in new clear method to Nav Menu stacks to work with Stacks 2 new clearing method so sub menu levels would display correctly in Stacks 2.
- Updated FreeStack theme plist file.
- Added in new 520px page width variations for Facebook Fan page use.
- Updated all FreeStack readme files.
- FreeStack v6.0 stacks only work with Stacks 2. They will not work with Stacks 1.4.4. **Only install this update if you are using Stacks 2+.**

Blueball FreeStack version 5.1 update. Released 07-08-11

This is an update that requires you to install the 7 updated FreeStack Nav Menu stacks and then restart Rapidweaver.

- Added in new z-index control to hud window on all 7 Nav Menu stacks. Default is set to 9999, still but you can now adjust it as needed by changing the number.
- Added 2 new Border Right controls to the hud window on all 4 horizontal Nav Menu stacks. You can set the color and the width of the right border that will be applied to all link items on the main parent menu level. Default width is set to 0px.
- Adjusted the left padding amount to match the right padding amount hud setting in all 4 horizontal Nav Menu stacks to visually balance out the main menu link items when using the new right border option.
- In Nav Menu stack #1 fixed a duplicate name in the plist file items causing some users confusion when setting up the hud options for it.

- In Nav Menu stack #3 fixed the hover background image name in the stack's css file so that it now displays as expected in the hover and current menu states.
- In Nav Menu stack #T1 fixed the parent level link hover state background so it now appears transparent as expected.

Blueball FreeStack version 5 update. Released 06-08-11

This is a major update that requires you to install the new FreeStack theme v5, all the FreeStack v5 stacks, and v5 theme styles then restart Rapidweaver.

- New Nav MenuT5 stack. Vertical pop out nav menu stack with transparent background on parent level. Sub menu level has adjustable background colors.
- New Nav MenuT1 stack. Horizontal drop down nav menu stack with transparent background on parent level. Sub menu level has adjustable background colors.
- All 5 existing Nav Menu stacks have been reworked with new features added to the hud areas.
- New Fixed Width stack. This is ideal for those wanting to use the variable page width theme variation to have elements like the Header stack, Nav Menu stacks or Footer stacks span the full browser window width but want their content in a fixed width stack in the middle of the window.
- New page width theme variations - 500px width for Facebook fan page and 320px width for mobile sites.
- Added in new set of background images, positioning, and repeat theme variations for the #pagewrapper div. Allows you to easily drop in a background image behind your page content if you want to. Comes with 7 default background image with a total of 10 image slots available. Default is set to hide.
- Updated Sidebar stack.
- Updated the blog page's css with new transparent png image files and tweaked css code for new stack release that will be included in the upcoming FreeStack Add-Ons Pack 1.

- Fixed a small bug in FreeStack Contact Form stack.
- Fixed a small bug in the FreeStack Tumblr Lite stack.
- Numerous small tweaks to most of the remaining FreeStack stacks.
- Updated FreeStack theme's plist file.
- Updated FreeStack theme's styles.css file.
- Updated FreeStack theme's default custom theme styles to include new theme variation settings.
- Updated the FreeStack theme's main readme file. Be sure to read through it for directions on using 3 new stacks.

Blueball FreeStack version 4 update. Released 02-03-11

This is a major update that requires you to install the new FreeStack theme v4 and all the FreeStack v4 stacks, then restart Rapidweaver.

- Updated the styles.css file.
- Updated and fixed a display issue with the body background image repeat and positioning theme variation css files.
- Updated and corrected a color picker display issue in the colourtag.css file.
- Updated the theme.plist file.
- Added new FreeStack Contact Form stack.
- Added new FreeStack Fixed Height stack.
- Added new FreeStack iFrame stack.
- Added new FreeStack Styler stack.
- Added top and bottom border radius options to FreeStack Breadcrumb stack.
- Added top and bottom border radius options to FreeStack Content stack.
- Added top and bottom border radius options to FreeStack Breadcrumb stack.
- Added top and bottom border radius options to FreeStack Footer stack.

- Fixed “Text Color” color picker in hud window for FreeStack Footer stack. Now displays the color correctly in the stack.
- Added top and bottom border radius options to FreeStack Header stack.
- Added top and bottom border radius options to FreeStack Logo stack.
- Added “Menu Alignment” option to hud windows in FreeStack Nav Menu1, Nav Menu2, Nav Menu3, and Nav Menu4 stacks for parent menu level items. The parent menu level items can now be aligned left or right.
- Fixed FreeStack Nav Menu 5 sub menu levels display issue where sub menu levels would be cut off (truncated) when displayed with some third party stacks. They now display as expected in full and are not cut off.
- Added top and bottom border radius options to FreeStack Sidebar stack.
- Added top and bottom border radius options to FreeStack Slogan stack.
- Added top and bottom border radius options to FreeStack Title stack.
- Fixed FreeStack Tumblr Lite stack display issue some users were encountering when used in a standard Stacks 2-Column stack. The stack now displays as expected in either column.
- Corrected duplicate div name creation issue that a few users encountered in some FreeStack stacks. No duplicate div names are generated by any FreeStack stack now. This may require you to replace a stack on a page in some instances after you update for it to display and function correctly in Rapidweaver sites created with previous versions of the FreeStack theme and stack.
- Extensive update and rewrite of Blueball FreeStack readme manual. Be sure to look through it for new usage instructions and details on using the 4 new FreeStack stacks.
- Updated Blueball FreeStack Changelog readme file.

Blueball FreeStack version 3 update. Released 01-04-11

- Updated all page width theme variation css files. Corrects centering issue some FreeStack users were experiencing on wider page widths and variable page width.
- Updated all CSS3 Page Shadow theme variation css files.
- Updated theme's styles.css file.
- Added new FreeStack File Share RW5 stack to use with Rapidweaver 5.02+ and the new Resources feature. This new stack does not replace the original FreeStack File Share stack that only works with Rapidweaver 4 using Assets.
- Updated FreeStack Logo stack. Fixed issue where width and height dimensions from hud window were not being added correctly to stack.
- Updated FreeStack Spacer stack. Unique div id name is now added for each instance of the stack on a stacks page.
- Updated 4 horizontal nav menu stacks. Fixed minor IE7 display issue of menu sub levels where they would appear behind other stacks. Also sub menu levels will now display outside the pagewrapper div as needed.
- Updated Changelog readme file.

Blueball FreeStack version 2 update. Released 12-15-10

- Added in new FreeStack Nav Menu5 vertical nav menu stack with popout/ cascading sub menu levels.
- Added in new FreeStack Twitter Share stack.
- Added in new variable page width theme variation option.
- Added in 11 page top margin options: You can adjust the top margin amount on your page in 10px increments up to 100px. The default top margin setting is 0px. Options are 0px, 10px, 20px, 30px, 40px, 50px, 60px, 70px, 80px, 90px, and 100px top margins.

- Added in 11 page bottom margin options: You can adjust the bottom margin amount on your page in 10px increments up to 100px. The default bottom margin setting is 20px. Options are 0px, 10px, 20px, 30px, 40px, 50px, 60px, 70px, 80px, 90px, and 100px top margins.
- Added in 9 new body background image position options: Top left (default), top center, top right, center left, center, center right, bottom left, bottom center, and bottom right.
- Added in 4 new body background image repeat (tiling) options: Repeat (default), repeat horizontally, repeat vertically, and no repeat.
- Added in 2 new pagewrapper background transparency options: Pagewrapper not transparent (default), and pageWrapper background transparent.
- Added in new Green theme style. You will need to install the new version of the FreeStack theme and restart Rapidweaver to see the new theme style in the inspector window.
- Updated readme files.

Blueball FreeStack version 1.1 update. Released 11-23-10

- Fixed small IE7 display bug in all 4 FreeStack Nav Menu stacks. You will need to install the new versions of each FreeStack Nav Menu stack.
- Added in 11 pre-built theme styles left out of initial FreeStack theme release. You will need to install the new version of the FreeStack theme and restart Rapidweaver to see the new theme styles in the inspector window.
- Added in a new FreeStack Spacer stack. This stack is to be used in the FreeStack Header stack to set the height of the FreeStack Header stack. See the main FreeStack readme file for more details. You will need to install this new FreeStack Spacer stack.
- Added in a 1 page Rapidweaver site file that has 3 pre-built FreeStack Header stacks for FreeStack users to copy into their site's stacks page to save time. See directions on how to use these FreeStack header stacks at the bottom of the example page.
